WEB PROGRAMMING
MINI PROJECT ABSTRACT

NAME:ASHOK ABRAHAM JOSEPH

REGISTER NUMBER-22BCE3202

FACULTY-EZHIL ARASI

My Mini Project is an online Pizza ordering website called AJ's Pizzeria. I have implemented the things I have learnt in class such as html, CSS, JavaScript and React. I have also used other tools such as Bootstrap and many other useful tools such as Context API and Reducers in order to implement the cart system.

AJ's Pizzeria website offers a delightful online experience for pizza lovers. With a vibrant interface and user-friendly design, customers can easily navigate through the menu and place orders. The website features a prominent navbar with a dropdown menu for exploring various food categories. Additionally, customers can access their shopping cart and contact information conveniently from the navbar. The main banner showcases enticing visuals of mouth-watering pizzas, accompanied by a welcoming message and a call-to-action button for ordering online. The website highlights special offers and coupons through an interactive carousel, enticing customers with discounts and deals. Furthermore, the website invites visitors to explore additional services, such as catering and birthday party bookings, creating opportunities for memorable pizza experiences beyond regular dining. Each service is presented with engaging visuals and compelling calls-to-action, encouraging users to learn more and make bookings.

In the footer section, users find essential company information and navigation links, ensuring easy access to essential pages like Home, Features, Pricing, FAQs, and About. Overall, AJ's Pizzeria website combines attractive visuals, intuitive navigation, and compelling offers to provide an immersive online platform for pizza enthusiasts, enhancing their dining experience and encouraging them to engage with the brand.
